                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New mammalian soluble interferon alpha-receptor forms - used for inhibiting, modulating or modifying the activities of interferon(s) Disclosure; Fig 7: 46pp; English.

Human transmembranal interferon alpha receptor (IFNAR) (W21804) includes a 21-amino acid transmembrane region. Novel, splice-deleted IFNAR forms 1 (W21805) and 2 (W21806) have been detected that lack this transmembrane domain. These, soluble non-membrane bound polypeptides can be expressed in host cells and used to inhibit, modulate or modify the activities of interferons alpha and beta in cells, tissues and organisms, or for diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            W21804 standard; W21804;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              23-SEP-1997 (first entry)
Transmembranal interferon alpha-receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Abramovich C, Ratovitski E, WPI; 95-200634/27.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens.

Compsn. of monoclonal antibodies against interferon receptor useful as immuno:modulator, eg. for treating AIDS
Disclosure; Fig.2A-2B; 105pp; English.
Disclosure; Fig.2A-2B; 105pp; English.
A recombinant soluble form of the human interferon class I reprotein extracellular domain, given in R71723, was expressed either E. coli or COS cell hosts. The protein was used to raimmunomodulatory monoclonal antibodies.

Novel splice-deleted interferon alpha-receptor (IFNAR) form 1

(W21805) is characterised by a new domain (S) which follows an end-deleted extracellular domain when compared to transmembranal in IFNAR (W21804). There is no transmembrane domain. The amino acid sequence is predicted from a cDNA clone (see also T73520) obtd. From human myeloma U266 cells. Soluble, non-membrane bound IFNAR splice-deleted forms 1 and 2 (see also W21806) probably regulate the response of human cells to IFNS, either by acting as IFN antagonists or by regulating the activity of the multiple IFN modulate or modify the activities of IFNS alpha and beta in cells, tissues and organisms, or for diagnostic purposes.
                                                                                                                                                                                                                                                                                                                                          Query Match

CC Novel splice-deleted interferon alpha-receptor (IFNAR) form 2 (W21806) is characterised by a double deletion when compared to C transmembranal IFNAR (W21804). The extracellular domain is shortened by 6 amino acid residues and is followed by a truncated intracellular domain. There is no transmembrane region. The amino acid sequence is predicted from a cDNA clone (see also T73521) obtd. C from human myeloma U266 cells. Soluble, non-membrane bound IFNAR C splice-deleted forms 1 (see also W21805) and 2 may regulate the response of human cells to IFNs, either by acting as IFN antagonists or by regulating IFN activities. They can be expressed in host cells and used to inhibit, modulate or modify the activities of IFNs alpha and beta in cells, tissues and organisms, corrected to the proposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20-OCT-1994; 075977.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence is the human CRFB4 sequence, DNA encoding it is used in the recombinant DNA (I) of the invention. (I) comprises a sequence (S1) cencoding the interleukin-10 (IL-10) receptor (ILION) and a sequence (S2) encoding CRFB4, both operably linked to expression control sequences. CC encoding CRFB4, both operably linked to expression control sequences. CC IL-10. Agonists are potentially useful, e.g. for preventing allograft rejection, as vaccine adjuvants, for treatment of photosensitivity. CC inflammation, autoimmune disease and septic shock, while antagonists are potentially useful for increasing immune responses against tumpours, cc viruses, bacteria and parasites (especially intracellular pathogens) and CC for preventing organ rejection. A vector containing (I) is used to creatore, e.g. by gene therapy, IL-10 sensitivity to a cell that expresses a dysfunctional IIIOR and is able to bind IL-10 but not to transduce a signal. Antisense CRFB4 sequences (especially ribozymes), can inhibit CC measure and localise CRBF4, for diagnosis of defective IL-10 activity in cells. Antibodies specific for CRFB4 are used to CC measure and localise CRBF4, for diagnosis of defective IL-10 activity. CC Tragments of (I) are used as primers or probes to assay CRFB4-specific CC RNA. Agonists/antagonists may be administered parenterally, orally or centally especially by intravenous injection or directly into a tumour or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel interferon gamma receptor beta chain polypeptide - for treatment of inflammatory bowel disease and liver damage Claim 3; Fig.2A; 86pp; English.
The IFN-gamma receptor beta-subunit encoded by a cDNA clone derived from mouse B-cells is given in R75782. Recombinant beta-subunit, pref. with the transmembrane anchoring domain deleted or inactivated and with the cytoplasmic domain deleted, may be used to treat pathological conditions associated with endogenous IFN-gamma production.
                                                          Zcytor? cytokine receptor polypeptide. Zcytor?; cytokine receptor; ligand-binding polypeptide; kidney; pancreas; type 2 cytokine receptor family; CRF2; prostate tissue; nervous tissue; type 2 cytokine receptor family; CRF2; prostate tissue; nervous tissue; agonist; cell proliferation; cell differentiation; renal disease; human; neural disease; pancreatic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PT Novel human Zcytor? DNA encodes a type 2 cytokine receptor - useful PT for treating renal, neural, pancreatic and prostatic diseases PS Claim 1; Pages 55-59; 72pp; English.

CC This represents the Zcytor? cytokine receptor. Zcytor? is a ligand-
CC binding receptor polypeptide and is a novel member of the type 2 cytokine receptor family (CRF2). An expression vector containing the Zcytor CC polynucleotide, operably linked to transcription promoter, a sequence CC encoding a transmembrane and intracellular domain, or both, and a CC transcriptional terminator can be used to transform host cells for the CC encoding a transmembrane and intracellular domain, or both, and a CC encoding a transmembrane and intracellular domain, or both, and a CC encoding a transmembrane and intracellular domain, or both, and a CC encoding a transmembrane and intracellular domain, or both, and a CC excombinant production of the polypeptide. The sequences can be used to Study the Zcytor? gene and to isolate ligands binding to it Zcytor? is combinant production of the polypeptide. The sequences can be used to Stimulate proliferation and CC differentiation of cell in these organs. The antagonists and agonists can also be used in the treatment of renal, neural, pancreatic and prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

The sequence is that of human interferon-gamma accessory factor-1. Incorporation of AF-1 into immune and tumour cells re-establishes normal function with elimination of malignant cells.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Searched
          Pred. No. is the number of results predicted by chance to hav score greater than or equal to the score of the result being and is derived by analysis of the total score distribution.

"Molecular cloning of ovine and bowine type I interferon receptor

graphics from uter1, and endometrial expression of messenger

ribonucleic acid for ovine receptors during the estrous cycle and

pregnancy.";

Lendocrinology 118:4757-4767(1997).

C.-I-FUNCTION: RECEPTOR FOR INTERFERONS ALPHA AND BETA. BINDING TO TYPE

I IFNS TRIGGERS TYROSINE PHOSPHORYLATION OF A NUMBER OF PROTEINS

C.-I-FUNDING JAKS, TYK2, STAT PROTEINS AND IFN-R ALPHA-AND BETA-

SUBUNITS THEMSELVES.

C.-I-SUBCLIDLAR LOCATION: TYPE I MEMBRANE PROTEIN.

C.-I-SUBLIDLARITY: EXPRESSED IN ALL TISSUES EXAMINED EXCEPT

C.-I-SUMLARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.

C.-I-SUMLARITY: BELONGS TO THE CLASS II CYTOKINE FAMILY OF RECEPTORS.

T Expression and developmental regulation of Ehk-1, a neuronal T Elk-like receptor tyrosine kinase in brain.";

L Neuroscience 63:163-178(1994).

C -!- FUNCTION: RECEPTOR FOR MEMBERS OF THE EPHRIN-A FAMILY. BINDS EPHRIN-A1, -A2, -A3, -A4 AND -A5.

C -!- FUNCTION: RECEPTOR FOR MEMBERS OF THE EPHRIN-A FAMILY. BINDS EPHRIN-A1, -A2, -A3, -A4 AND -A5.

C -!- FUNCTION: TYPOSINE PROSINE - ADP + PROTEIN TYROSINE PHOSPHATE.

C -!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

C -!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PRODUCED BY ALTERNATIVE PRODUCTS: A NUMBER OF VARIANTS ARE PRODUCED BY ALTERNATIVE SPLICING.

C -!- ALTERNATIVE SPLICING.

C -!- TISSUE SPECIFICITY: ALMOST EXCLUSIVELY EXPRESSED IN THE NERVO SYSTEM. PREDOMINANTLY EXPRESSED IN NEURONS.

C -!- SIMILARITY: TO OTHER PROTEIN TYPOSINE KINASES IN THE CATALYTI DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.

C -!- SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III LIKE DOMAINS.
